

STACKLY SMART LIVING

SMART HOME INNOVATION THEME — TECHNICAL & PRODUCT DOCUMENTATION

1. Introduction & System Overview

Stackly Smart Living is a high-end residential automation marketing site positioned for luxury homeowners, architects, and estate managers. It presents a single integrator offering lighting, climate, security, shading, audio/video, access control, networking, and whole-home control as one unified, locally-processed system — explicitly contrasted against "a wall of apps" or fragmented consumer smart-home gadgets.

The site spans a marketing-led homepage, a detailed Services page with packages and FAQs, an About page covering company philosophy and team, a Contact page built around a multi-step project-consultation intake form, a Blogs/field-notes section, and client-side authentication (Sign In / Create Account) with a role selector for Client vs. Admin dashboards.

This documentation was produced by inspecting the live GitHub Pages deployment page-by-page, since the underlying repository source was not provided directly. Structural, content, and interaction details below reflect what is observable in the rendered site. The Client and Admin dashboard pages referenced by the sign-in role selector could not be located at a guessable URL and were not directly inspected; their existence is inferred from the login/register forms rather than confirmed by direct access.

2. Branding Note: Stackly vs. "LUMEN"

The site's logo, navigation, footer, and page titles consistently brand the company as "Stackly" / "STACKLY Smart Living Inc." However, large sections of the About and Home page body copy refer to the company internally as "LUMEN" (e.g. "LUMEN does not install gadgets," "About Lumen // Architectural Engineering," client testimonials praising "LUMEN's approach"). This inconsistency appears to be a leftover from an earlier working name ("Lumen") that was not fully replaced during a rebrand to "Stackly," and is worth flagging as a content clean-up item rather than an intentional dual-brand strategy.

3. Technology Stack & Dependencies (Observed)

Platform

- **Static Multi-Page Site on GitHub Pages:** Served directly from a GitHub Pages deployment with flat top-level routes (index.html, services.html, about.html, contact.html, blogs.html, login.html, register.html, 404.html) rather than a nested /pages/ directory, differing from the sibling CraftMarket theme's structure.
- **HTML5 & CSS3 Layout:** Consistent with the broader "Stackly" theme family, the site follows an MPA structure with a shared header/footer repeated per page and long, section-stacked page bodies.

- **Client-Side Interactivity:** A multi-step ("Step 1 of 2") project-consultation form on Contact, a tabbed/sliding routine selector (Good Morning / Movie Night / Leaving Home / Good Night) on the homepage, a blog filter-by-topic rail, and a role-aware login/register flow all indicate a shared vanilla-JavaScript interaction layer.
- **Third-Party Sign-In Buttons:** Both login.html and register.html present "Sign In/Up with Google" and "Sign In/Up with Apple" buttons; given the rest of the Stackly theme family uses browser-local session simulation rather than real OAuth, these are most likely presentational placeholders rather than wired-up SSO integrations, though this could not be confirmed without the JavaScript source.

Note: Because the repository source could not be located, this section documents technology choices as observable from the deployed site's behavior and content, rather than from reading the actual HTML/CSS/JS files.

4. Visual Design Language

- **Architectural, Low-Contrast Luxury Aesthetic:** The visual tone leans dark, materials-driven, and technical — brass keypads, anodized aluminum, concrete, stone, and glass feature heavily in photography, paired with engineering-register copy ("Latency SLA," "DALI-2 bus," "thermal burn-in") rather than consumer-friendly smart-home language.
- **Full-Bleed Hero Imagery:** Each major page (Home, Services, About, Contact) opens with a large architectural photograph or dusk/interior shot, paired with a short all-caps or large serif-adjacent headline and a dual-CTA pattern (primary action + secondary "explore/learn more").
- **Stat-Chip Credibility Rows:** The homepage hero carries a four-item stat strip (10+ Years experience, 500+ Smart homes, 24/7 Support network, 100% Custom solutions); About repeats the pattern with its own set (Founded 2018, 180+ Estates executed, 99.98% Reliability SLA, KNX/DALI Protocols).
- **Numbered Process & Phase Sections:** "How It Works" (Consult → Design → Install → Support) appears on both Home and Services; About expands this into a four-phase, month-by-month build workflow (Schematic Discovery, Pre-Drywall Containment, Off-Site Staging, Day-One Commissioning).
- **Scheduled Routine Cards (Home):** The "Living in Rhythm" section presents four named automation routines (Good Morning, Movie Night, Leaving Home, Good Night) as selectable tabs, with the active routine (Good Morning) showing a scheduled time, a scene label, and a bulleted device-action list — implying a tabbed JS component rather than four static blocks shown at once.
- **System-Status Footer Widget:** Every page's footer includes a persistent "System status — All Core Telemetry Operations Nominal" line, reinforcing the brand's reliability/engineering positioning even outside the main content.

5. Services, Packages & Pricing

The Services page documents eight automation categories (Lighting, Climate, Security, Sound & Vision, Retrofits, Support, Energy & Storage, Shading & Glazing) and presents three tiered starting packages:

Package	Starting Price	Included
Essential	\$4,900	Lighting & climate · up to 6 rooms · app control · 1 year support
Complete	\$14,500	Everything in Essential · security & access · whole-home audio · 3 years support
Bespoke	Custom	Unlimited rooms · home cinema · custom interfaces · lifetime support

Pricing is presented as a starting point rather than a final quote, with each tier CTA-labeled "Inquire Now" rather than an instant checkout — consistent with a high-touch, consultation-led sales model rather than self-serve e-commerce.

6. Overall Layout

Every page shares a persistent header (logo, Home / Services / About / Contact Us / Blogs navigation, a Sign in link, and a Menu toggle for smaller viewports) and a detailed, multi-column footer: a brand blurb, the recurring system-status line, Services and Company link columns, and a "Architectural Dispatch" quarterly-newsletter signup. Public pages open with a full-bleed hero and a short stat strip, then stack into labeled sections (each preceded by a small all-caps eyebrow label such as "Approach," "Process," "Packages," or "FAQ") before closing with a consultation-booking call-to-action band just above the footer.

7. Public-Facing & Account Architecture Overview

A. Public-Facing Architecture

Home Page (index.html)

- **Hero:** "Smart Living" headline over a city-skyline evening photograph, with Book a Consultation / Explore Smart Home Solutions CTAs and a four-stat credibility strip.
- **Technology Should Disappear (About teaser):** Brand philosophy summary plus a three-point "Approach" list (Design first, Privacy by default, One system) and a founded-year/homes-delivered stat pair.
- **Precision Automation Systems:** An eight-card system grid — Smart Lighting, Climate Control, Home Security, Smart Audio & Video, Motorized Blinds, Access Control, Home Networking, Whole-Home Core — each with a photo, short description, and "Learn More" link.
- **How It Works:** A four-step Consult / Design / Install / Support process summary.
- **Installed & Living (Portfolio):** Three named case-study cards — Hillside Villa (Los Angeles, 2025), Lumen Apartment (Copenhagen, 2024), Sigma Offices (Berlin, 2024) — each with a location, year, and one-line result.
- **Living in Rhythm:** The four-tab scheduled-routine selector described above, defaulting to a detailed "Good Morning" scene (blinds, radiant-floor climate target, and master-suite audio cue).
- **Technology That Works Around You:** A six-pillar capability section — Customized Automation, Professional Installation, Seamless Integration, Reliable Technology, Expert Concierge Support, Scalable Solutions.
- **Client Perspectives:** Three attributed testimonials (an architect, a homeowner, and a private estate director).
- **Certifications Strip:** Lutron Pro, Crestron Elite, Control4 Premier, KNX Certified, CEDIA Member.
- **Closing CTA:** A "Ready to Make Your Home Smarter?" band with Book a Consultation / Contact Us actions and three guarantee chips (Free Site Audit, 3D System Schematic, 5-Year Warranty).

Services Page (services.html)

- **Hero & Spec Strip:** "Precision Systems for Architectural Spaces" headline with a four-metric spec row (Latency SLA < 12ms, 100% Local architecture, KNX/DALI-2 standards, Concealed infrastructure).
- **What We Automate:** An eight-category breakdown — Lighting, Climate, Security, Sound & Vision, Retrofits, Support, Energy & Storage, Shading & Glazing — each numbered and photographed.
- **Seamless Physical Integration:** Two detailed hardware/installation callouts — Architectural Keypads & Ocular Displays, and Concealed Millwork Low-Voltage Engineering.
- **How It Works:** The same four-step process block as the homepage.
- **Starting Points (Pricing):** The three-tier Essential / Complete / Bespoke package table described above.
- **FAQ:** Six questions covering retrofitting existing homes, supported platforms (Lutron, Crestron, Control4, KNX), installation timelines, fault handling, integrating existing equipment, and telemetry/biometric privacy.
- **Closing CTA:** "Ready for a Smarter Home?" consultation booking prompt.

About Page (about.html)

- **Hero & Credentials Strip:** "Where Invisible Engineering Meets Architectural Purity," with founded-year, estates-executed, reliability-SLA, and protocol stats.
- **The Stackly Philosophy:** Four core principles — Architectural Invisibility, Local-First Sovereignty, Open Standards Durability, Circadian & Human Biology — each with a short tag (e.g. "Air-Gapped Privacy," "30-Year Horizon").

- **The Balance of Core & Touchpoint:** Two detailed engineering features — The Engineering Studio & Rack Staging, and The Tactile Touchpoint & Metallurgy (1.8N actuation force, custom-engraved brass/bronze/gunmetal finishes).
- **Architects of the Invisible Home (Team):** Four named profiles — Marcus Vance (Co-founder & Principal Architectural Engineer, ex-Foster+Partners), Elena Rostova (Head of Spatial Software & UX, ex-Bang & Olufsen), Julian Thorne (Director of Low-Voltage Systems), Maya Lin-Siddiq (Lead Circadian & Acoustic Designer, IES member).
- **How We Build With Architects & Builders:** A detailed four-phase, month-by-month workflow — Schematic Discovery & Cable Mapping (Month 1), Pre-Drywall Containment Precision (Months 2–4), Off-Site Staging & Code Validation (Months 4–6), Day-One Commissioning & Lifetime SLA — each with sub-bullets and a representative photo.
- **Engineering Trust & Open Alliances:** Five accreditations — KNX Certified, DALI-2 Alliance, CEDIA Ultra-Lux, AIA Partner, BACnet Golden.
- **Closing CTA:** "Collaborate on Your Next Estate" with a consultation link and a direct architectural@stacklyliving.com email address.

Contact Page (contact.html)

- **Hero & Trust Strip:** "Connect With Our Spatial Engineers," with a < 4h SLA, 100% NDA, and Partner Access credibility row.
- **Project Consultation Request (multi-step form):** Explicitly labeled "Step 1 of 2," covering project classification (Private Residence / Commercial Pavilion / Marine-Multi-Dwelling / Heritage Retrofit), architectural stage, lead contact details, project location, estimated conditioned area, an optional CAD/Revit/PDF/DWG/IFC upload (up to 150MB), and a system-focus/considerations field, closing with "Request Consultation & Technical Review."
- **Direct Contact Desks:** Three specialized contact routes — Architectural & Specification Desk, General Contractor Operations, and Client Concierge & Commissioning — each with its own email and phone extension.
- **Live Status Widget:** An "All Systems Operational" telemetry card citing a 2.4-hour average desk response time.
- **What to Expect (four-stage engagement):** Schematic Assessment (48-hour turnaround), Systems Discovery Call, Topology & Budget, GC Pre-Drywall Walk.
- **Design Studios & Consultation Ateliers:** Four physical office locations with full addresses, phone numbers, and hours, listed below.

Studio / Office	Address
Headquarters	MMR Complex, Chinna Thirupathi, near Chinna Muniyappan Kovil, Salem, Tamil Nadu 636008
Bengaluru Branch	Evolve Studio, 4th Floor, Khata No 10, Begur-Koppa Rd, Yelenahalli, Begur, Bengaluru, Karnataka 560068
Hyderabad Branch	4th Floor, R.R. Towers, Plot No. 188 & 189, Kavuri Hills, Madhapur, Hyderabad 500033
Coimbatore Branch	79 Aiswarya Complex, Nethaji Road, PN Palayam, Coimbatore, Tamil Nadu 641037

- **FAQ:** Four technical questions on engagement timing, stamped electrical submittals, heritage/historic-structure retrofits, and warranty/telemetry support.
- **Closing CTA:** An accelerated 24-hour review offer for urgent bid or pre-drywall deadlines.

Blogs Page (blogs.html)

- **Hero & Topic Filter:** "Spatial Intelligence, Invisible Engineering & The Modern Estate," with a topic filter rail (All publications, Acoustic design, KNX integration, Conduit & low voltage, Thermal HVAC, Estate case studies).
- **Featured Field Note:** A highlighted 12-minute case study — "Acoustic Isolations & Conduit Topologies: Wiring the 18,000 Sq. Ft. Carmel Coastal Residence" — with a pull-quote from Marcus Vance.
- **Field Reports & Engineering Monographs:** Three further articles with read-time, topic tags, author byline, and photo — covering tactile keypad millwork, a 12-zone KNX HVAC backbone, and pre-drywall DALI-2 coordination.
- **Contributing Minds:** The same four team members from the About page, re-presented here with blog-specific stats (e.g. "31 field notes · 20 yr infrastructure" for Julian Thorne).
- **Architectural Dispatch Newsletter:** A quarterly print/digital newsletter signup citing "over 4,200" subscribed architects, contractors, and estate owners, with a discipline dropdown (Architect, General Contractor, Interior Design Studio, Estate Owner, Electrical Engineer) and an ISSN reference (ISSN 2993-8109).
- **Closing CTA:** A consultation-booking band restating the direct architectural desk phone number.

Authentication Pages (login.html & register.html)

- **Split-Panel Auth Layout:** Both pages pair a full-height background image (auth-signin-panel.webp / auth-signup-panel.webp) with a centered form card carrying the Stackly logo.
- **Sign In Form:** Name, email, password (minimum 8 characters, stated inline), and a "Dashboard role" selector (Client dashboard / Admin dashboard) — plus a Forgot Password link and a link through to Create Account.
- **Create Account Form:** Name, email, password (same 8-character minimum), and an "Account type" selector (Client / Admin), plus a link back to Sign In.
- **Social Sign-In Options:** Both forms present Google and Apple sign-in/sign-up buttons below the primary form, separated by an "OR" divider.
- **Terms Acknowledgment:** Both pages close with a Terms of Service / Privacy Policy agreement notice.

The Client dashboard / Admin dashboard role selector mirrors the role-based routing pattern seen in the Beauty, Art & Craft, and CraftMarket Stackly-family themes, strongly implying this theme also ships dedicated client- and admin-facing dashboard pages. However, no link to those dashboard pages was discoverable from the public navigation, footer, or form markup during this review, so their structure and content could not be directly documented.

Error Page (404.html)

- **Minimal Not-Found State:** A short, on-brand message ("That address doesn't match a room in the house") with "Go back" and "Return home" actions — notably simpler than the rotating multi-message 404 pattern used in the CraftMarket theme.

8. Forms, Validation & Data Handling (Observed)

- **Multi-Step Lead-Qualification Form:** The Contact page's consultation request is explicitly staged ("Step 1 of 2"), collecting project classification, architectural phase, contact details, location, square footage, an optional large-file CAD upload (up to 150MB), and project notes — a materially more complex intake flow than the single-screen contact forms used in the other Stackly-family themes, reflecting the B2B/high-ticket nature of the offering.
- **Inline Password Requirement:** Both auth forms state the 8-character minimum directly in the field's helper text rather than surfacing it only on validation failure.

- **Newsletter Segmentation:** The Blogs page newsletter form collects a "Primary Discipline" alongside the email address, suggesting subscriber segmentation (architect vs. contractor vs. estate owner, etc.) rather than a single flat mailing list.

As with the other Stackly-family theme documentation, exact client-side validation logic, storage mechanism (e.g. sessionStorage vs. a real backend), and role-based routing behavior could not be confirmed without access to the site's JavaScript source.

9. SEO & Content Notes

- **Per-Page Metadata:** Each page sets a distinct <title> and meta description tuned to its content (e.g. Services: "Precision smart-home systems for architectural spaces..."; Contact: "Request a project consultation with Stackly spatial engineers...").
- **WebP Imagery Throughout:** All observed photography — hero banners, service category images, team portraits, case-study photos, blog article images — is served in .webp format.
- **Descriptive, Narrative Alt Text:** Images carry scene-setting alt text (e.g. "Round thermostat set to 21.5 degrees on a plaster wall," "Bronze keypad set into a stone pier") rather than generic filenames, reinforcing the editorial/architectural tone even for accessibility text.
- **Cache-Busting Query Parameters:** Several image URLs carry a trailing ?v=2 or ?v=crisp parameter (e.g. Carmel-coastal-residence.webp?v=2, contact-hero.webp?v=crisp), indicating the asset pipeline uses versioned query strings to bust CDN/browser caches after image updates.
- **Dead-Link Pattern:** The large majority of secondary CTAs across every page ("Learn More," "Book a Consultation," "Inquire Now," footer utility links such as Privacy Policy and Terms of Service) resolve to 404.html rather than dedicated destination pages — expected for a theme/template demo, but worth flagging if this site is adapted for a real deployment.

10. Future Scalability Insights

As a static marketing and lead-generation site with client-side-only authentication, moving Stackly Smart Living toward a production platform would require:

- **Backend Lead & CRM Integration:** Wiring the multi-step consultation form (including the 150MB CAD/Revit upload) to a real backend and CRM pipeline, so project submissions, file attachments, and lead routing by office (Salem, Bengaluru, Hyderabad, Coimbatore) are captured and actionable rather than posting nowhere.
- **Real Authentication & Role-Based Dashboards:** Replacing the client-side-only Sign In/Create Account flow with server-verified authentication, and building out the Client and Admin dashboards implied by the role selector but not present in the current page set.
- **Content Management for Blogs & Case Studies:** Moving the currently static field-notes and portfolio case studies into a CMS would let the Architectural Dispatch newsletter and blog topic filters operate over a real, growing content library instead of a fixed three-article set.
- **Resolving the Stackly / LUMEN Brand Inconsistency:** A full content pass to standardize on one brand name throughout headers, body copy, and testimonials would remove the confusion noted in Section 2.
- **Live System Status & Telemetry:** Connecting the recurring "All Core Telemetry Operations Nominal" footer widget and the Contact page's live-status card to real monitoring data would turn a currently decorative trust signal into an operational one.
